Experiment 6

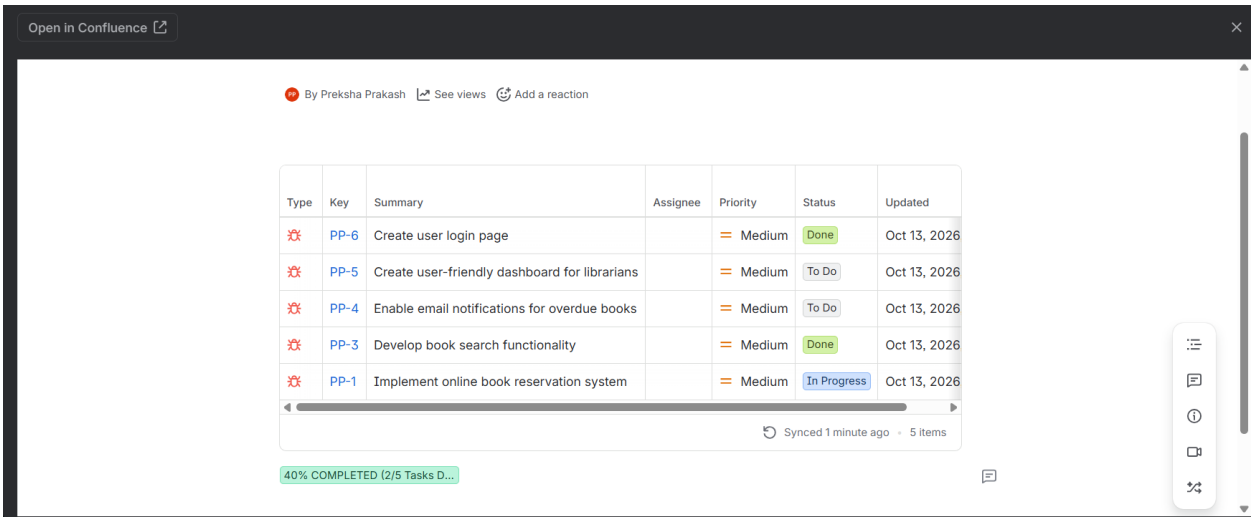

Aim:

To integrate Jira Software with Atlassian Confluence to streamline project management, track task progress live via Jira macros, and visualize sprint completion metrics using progress bars for a Library Management System.

Procedure:

1. Jira Setup: Create a Jira project for "Library Management System" and add 5 tasks with varied statuses (To Do, In Progress, Done).
2. Confluence Page Creation: Open Confluence and create a new page titled "Library Management System Project Overview".
3. Embed Jira Issues: Insert the Jira Macro (/jira) to display all 5 issues along with their live statuses on the page.
4. Add Progress Bar: Insert the Progress Bar or Status Macro to visually represent overall completion (e.g., 40% or 60% complete).
5. Publish & Capture: Publish the Confluence page and take a screenshot showing the embedded issues and progress indicator.

Result:

Successfully linked Jira tasks to a Confluence project overview page and created a progress bar to visually monitor task completion.
