Experiment 5

Aim:

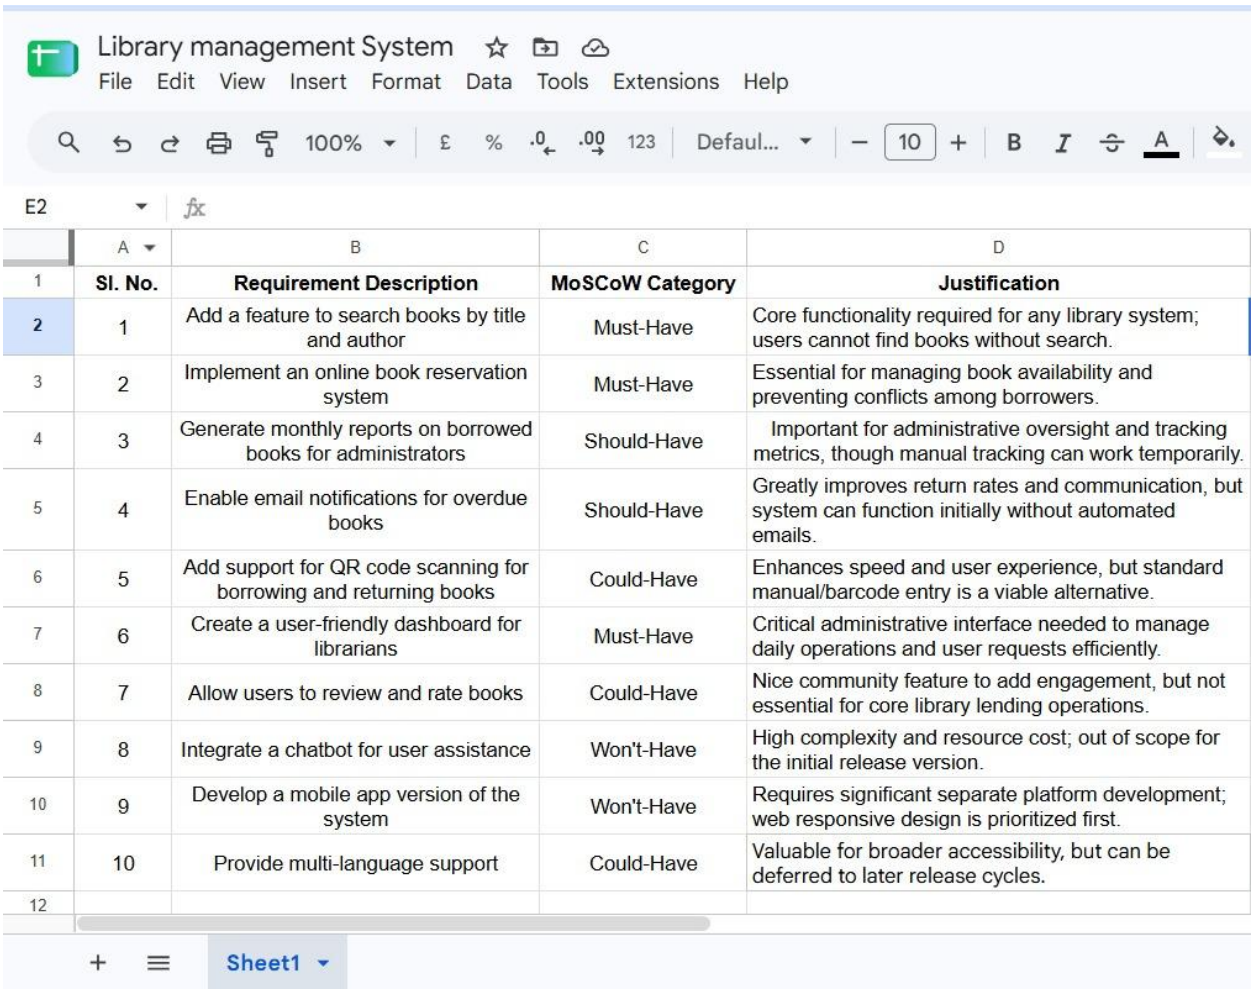

To analyze the software requirements for a Library Management System and categorize them using the MoSCoW prioritization method (Must-Have, Should-Have, Could-Have, Won't-Have) in Google Sheets based on user impact and feasibility constraints.

Procedure:

1. Requirement Analysis: Review the provided list of functional and non-functional requirements for the Library Management System.
2. Criteria Evaluation: Assess each requirement based on stakeholder impact and resource feasibility.
3. MoSCoW Categorization: Classify each requirement into Must-Have, Should-Have, Could-Have, or Won't-Have categories.
4. Spreadsheet Setup: Create a new Google Sheet with columns for Sl. No., Requirement Description, MoSCoW Category, and Justification.
5. Data Entry & Formatting: Populate the table with all requirements, apply text wrapping, and format headers for professional presentation.

Sl. No.	Requirement Description	MoSCoW Category	Justification
1	Add a feature to search books by title and author	Must-Have	Core functionality required for any library system; users cannot find books without search.
2	Implement an online book reservation system	Must-Have	Essential for managing book availability and preventing conflicts among borrowers.
3	Generate monthly reports on borrowed books for administrators	Should-Have	Important for administrative oversight and tracking metrics, though manual tracking can work temporarily.
4	Enable email notifications for overdue books	Should-Have	Greatly improves return rates and communication, but system can function initially without automated emails.
5	Add support for QR code scanning for borrowing and returning books	Could-Have	Enhances speed and user experience, but standard manual/barcode entry is a viable alternative.
6	Create a user-friendly dashboard for librarians	Must-Have	Critical administrative interface needed to manage daily operations and user requests efficiently.
7	Allow users to review and rate books	Could-Have	Nice community feature to add engagement, but not essential for core library lending operations.
8	Integrate a chatbot for user assistance	Won't-Have	High complexity and resource cost, out of scope for the initial release version.
9	Develop a mobile app version of the system	Won't-Have	Requires significant separate platform development; web responsive design is prioritized first.
10	Provide multi-language support	Could-Have	Valuable for broader accessibility, but can be deferred to later release cycles.

	A	B	C	D
1	**Sl. No.**	**Requirement Description**	**MoSCoW Category**	**Justification**
2	1	Add a feature to search books by title and author	Must-Have	Core functionality required for any library system; users cannot find books without search.
3	2	Implement an online book reservation system	Must-Have	Essential for managing book availability and preventing conflicts among borrowers.
4	3	Generate monthly reports on borrowed books for administrators	Should-Have	Important for administrative oversight and tracking metrics, though manual tracking can work temporarily.
5	4	Enable email notifications for overdue books	Should-Have	Greatly improves return rates and communication, but system can function initially without automated emails.
6	5	Add support for QR code scanning for borrowing and returning books	Could-Have	Enhances speed and user experience, but standard manual/barcode entry is a viable alternative.
7	6	Create a user-friendly dashboard for librarians	Must-Have	Critical administrative interface needed to manage daily operations and user requests efficiently.
8	7	Allow users to review and rate books	Could-Have	Nice community feature to add engagement, but not essential for core library lending operations.
9	8	Integrate a chatbot for user assistance	Won't-Have	High complexity and resource cost; out of scope for the initial release version.
10	9	Develop a mobile app version of the system	Won't-Have	Requires significant separate platform development; web responsive design is prioritized first.
11	10	Provide multi-language support	Could-Have	Valuable for broader accessibility, but can be deferred to later release cycles.
12				

Result:

Successfully prioritized all Library Management System requirements using the MoSCoW framework in Google Sheets.
