Experiment 8- MoSCoW and Kano Prioritization for Online Learning Platform

Aim:

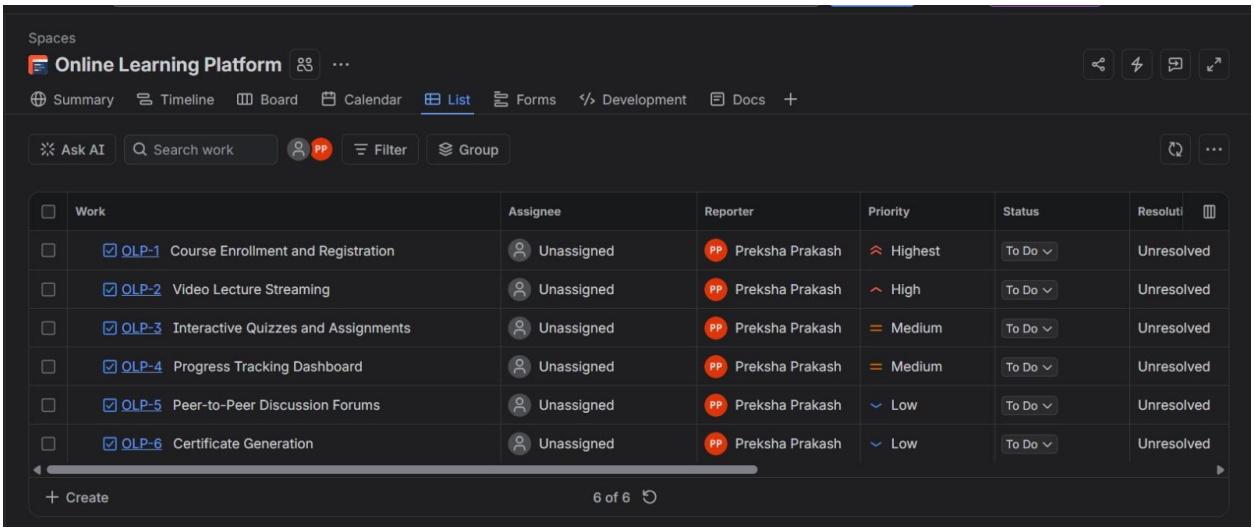

To categorize and prioritize the functional requirements of an Online Learning Platform in Jira Software using the MoSCoW and Kano analysis frameworks.

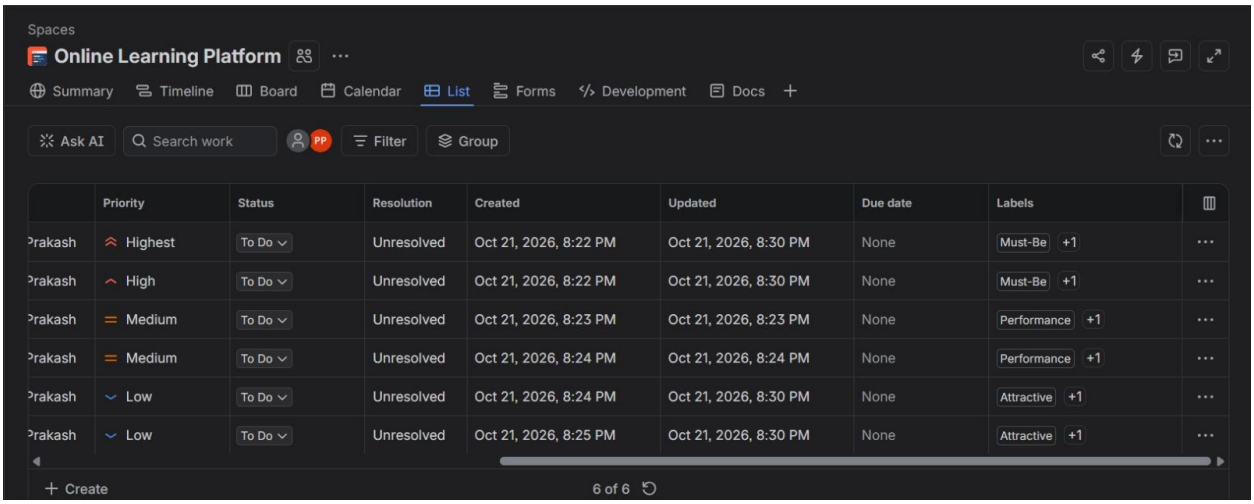

Procedure:

1. Create Project: Open Jira Software, create a new project/space using the Kanban template, and name it Online Learning Platform (Key: OLP).
2. Define Requirements: Click + Create to add the 6 core functional requirements as tasks/stories:

- Course Enrollment and Registration
- Video Lecture Streaming
- Interactive Quizzes and Assignments
- Progress Tracking Dashboard
- Peer-to-Peer Discussion Forums
- Certificate Generation

3. Assign MoSCoW & Kano Labels: For each requirement, navigate to the Labels field and assign the appropriate MoSCoW (Must-Have, Should-Have, Could-Have) and Kano (Must-Be, Performance, Attractive) tags.
4. Set Priority Levels: Adjust the Jira Priority field for each requirement corresponding to its MoSCoW tag (Highest/High for Must-Have, Medium for Should-Have, Low for Could-Have).
5. Configure View & Capture: Switch to the List view, ensure the Priority and Labels columns are enabled and visible, and capture screen.

Result:

Successfully categorized and prioritized the 6 core requirements for the Online Learning Platform in Jira using the MoSCoW and Kano models.
